

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE Catania 24-28 September 2012

Polytechnic University of Bari DICATECh prof. Pasquale Colonna

# **SUMMER SCHOOL SIIV 2012**Road Safety Management

# Road Network Safety Management Practical Application and Research Needs

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# Working Hypothesis of the Directive

These working hypotheses are correct?

# In particular:

upgrading of road infrastructure project:

- significantly increases the level of road safety?
- represents the priority actions to be implemented for road safety?

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

Margins of decision of different transport systems			Mode	Accident Rate
Design of the	Control	User Behavior		
Route	Systems			
XXXXXX	XX	XX	Railroad	XXX
XXXXXXXX	XX	XX	Airway	Х
XXXXXXXX	XXXXXXXX	XXXXXXXXX	Road	XXXXXXXXXXXXXX

- In this thriller we must seek the guilty, the murderess. Where the clues lead us? towards the control systems and user behavior
- But in the case of the roads to reduce accident rates where we focus? On the Design of the Route! >>> Is it reasonable?

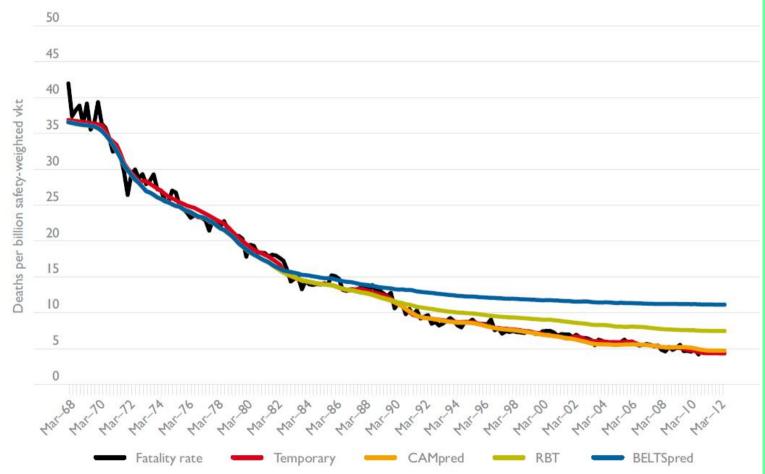

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE Catania 24-28 September 2012

# **Critical Considerations**

Importance of Control Systems

Effects of seat belt wearing, RBT and speed cameras on Australia's fatality rate

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

User Behavior

The increased risk of road system is due to the different behavior (degrees of freedom) of the different users.

The possible degrees of freedom are the speed and the position in the cross section

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

User Behavior

The Behavior of Non-Habitual User can be very different from that of Habitual User

The behavior characteristics of Non-Habitual User are quite independent of the type of risk

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

User Behavior

External risk: risk not known by the driver or not foreseeable in the specific circumstances of time and place. The other risks are defined Internal Risks.

The Behavior is different if the User encounters an External or Internal Risk

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

User Behavior

But when the Behavior Compensation is impossible?

Certainly only if the driver doesn't knows the risk or is not able to predict it and therefore only if the Risk is an External Risks.

Instead the behavior compensation can occur if the risk is an Internal Risk.

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

User Behavior

the countermeasure is effective if

a) it does not internalize the risk

or

b) it internalizes the risk without inducing compensation at the level of speed and trajectory

Further clues (round table on Friday)

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

User Behavior

Really the possible degrees of freedom are the speed and the position in the cross section?

Really the Behavior of Non-Habitual User can be very different from that of Habitual User?

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

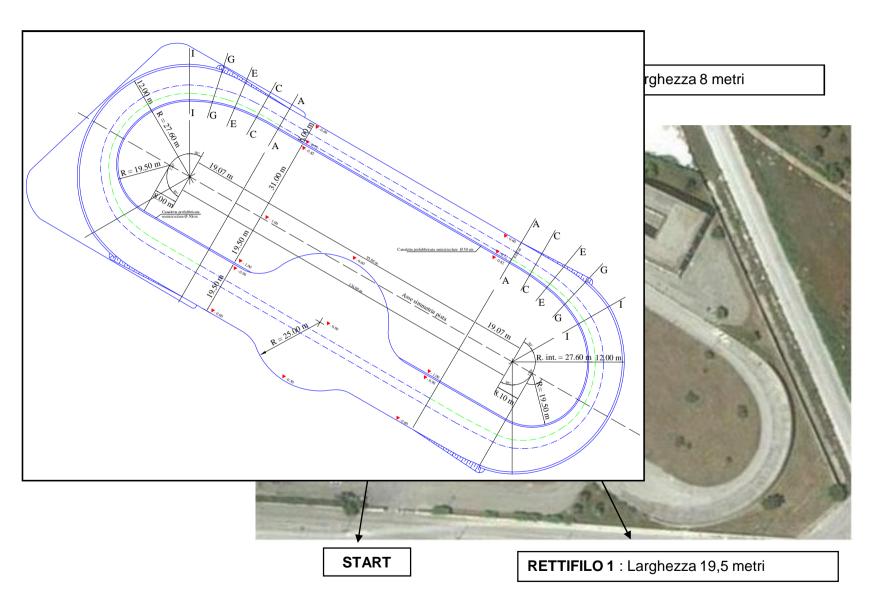

A group of users has been subjected by Polytechnic University of Bari to a driving test of a circuit of known geometry on board of a vehicle instrumented with high precision GPS.

Were processed data relating to speed and trajectory. Were analyzed the data of drivers as a function of the geometry and the number of laps already paths.

# Descrizione generale - il circuito

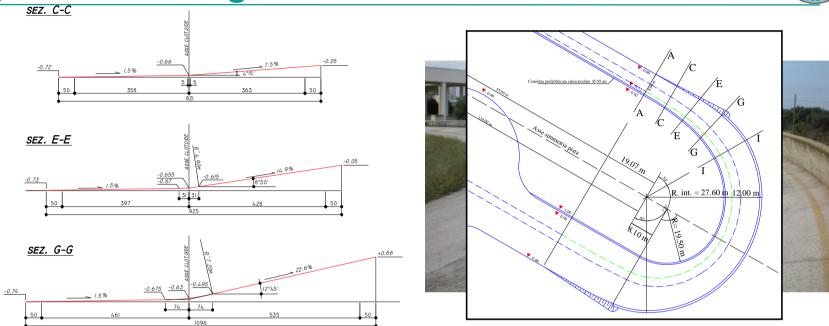

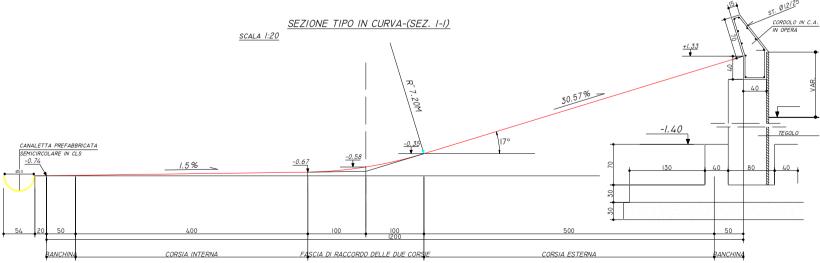

# Descrizione generale - il circuito

RNSF - PA and Research Needs - P. Colonna

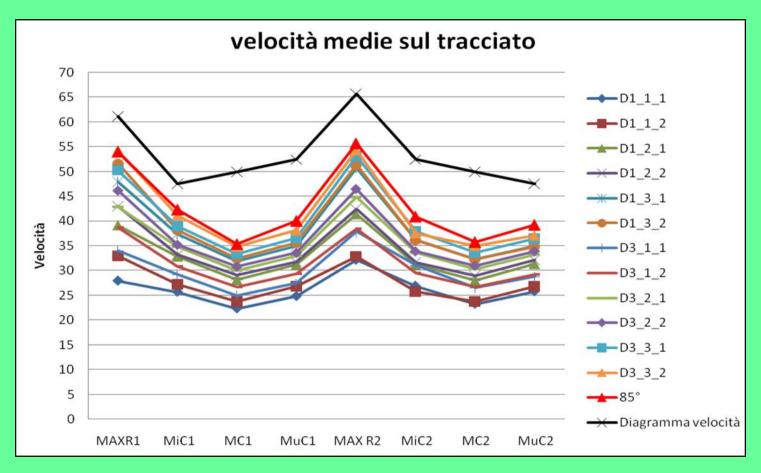

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

In general the speed of the drivers is increased with the number of laps completed.

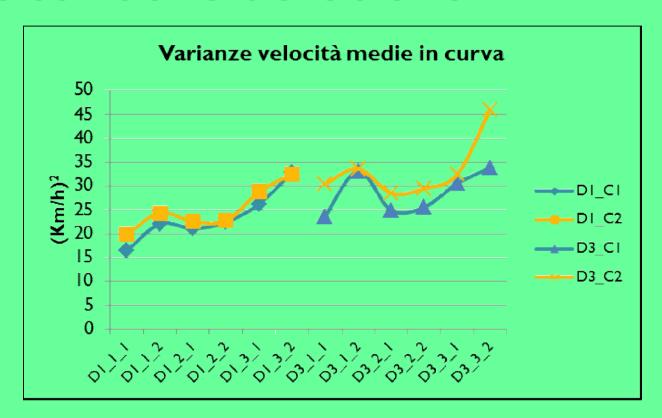

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

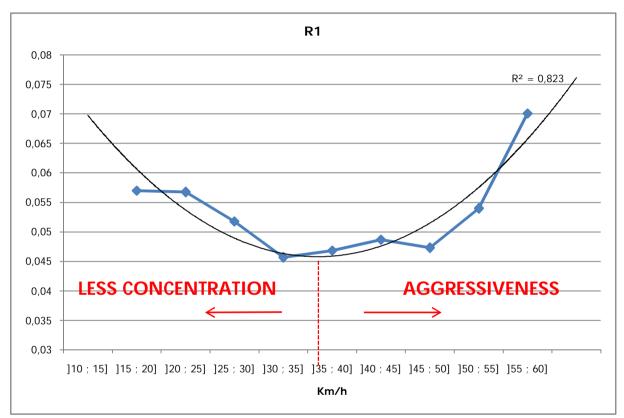

In general the variance of the speed of the drivers is increased with the number of laps completed.

# **Critical Considerations**

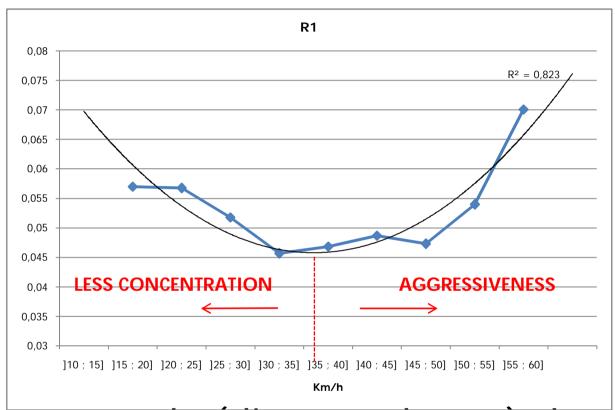

The average displacement of the trajectories depends on the speed: there is a particular value of the speed for which the displacement is minimal (optimum of feeling).

# **Critical Considerations**

For lower speeds (distracted user) the displacement is smaller and for higher speeds (aggressives user) the speed is higher.

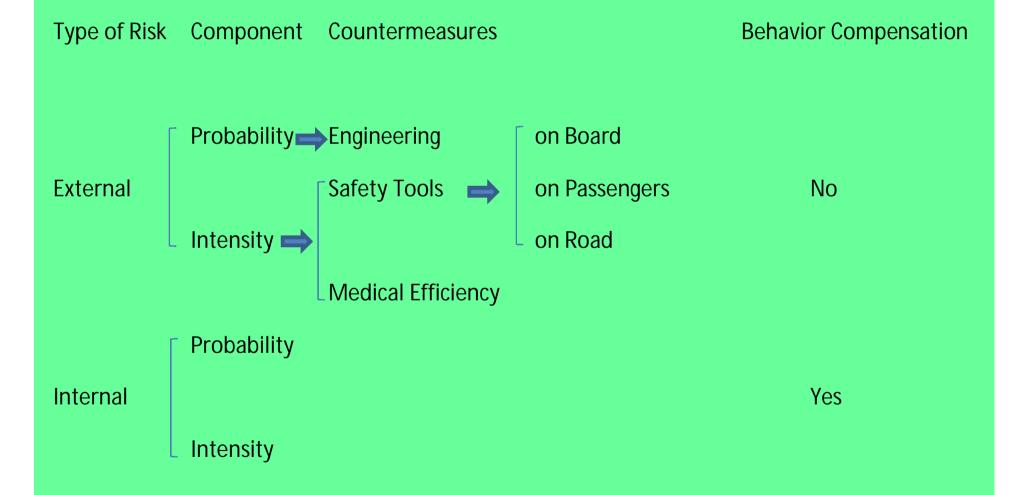

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# **Critical Considerations**

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE Catania 24-28 September 2012

# A possible new interpretation on WHY road accidents happen

Theoretical principles and practical application in the framework of the European Directive 2008/96/CE

Catania 24-28 September 2012

# Thank you very much to all partecipant to Catania 2012 SIIV Summer School for stimulating exchange of ideas
